

Instructions on how to install and use Lightroom presets

Page 1 -> Quick installation guide and How to use

Page 2-3 -> Detailed installation guide with pictures

Video Tutorial – How to Install Lightroom Presets: <https://youtu.be/t7BufBkahiQ>

Installation

1. Unzip the downloaded file by double-clicking it.
2. Open Lightroom on your computer.
3. Go to Preferences and open the tab Presets.
4. Click "Show Lightroom Preset Folder"
5. Open the folder Lightroom -> Develop Presets
6. Copy the contents of the Preset Pack folder (found in your downloads) into the "Develop Presets" folder.
7. Restart Lightroom.

You are done! Have fun using the presets. ☺

How to use

1. Open the photo you want to edit in your Develop tab in Lightroom.
2. On the left side of the screen, browse to the Preset Pack in the Preset tab.
3. Scroll through them and click on the one you want to apply.

Note:

As every photo is different, small adjustments are recommended to achieve an optimal result.

There are three basic steps you can do to make the presets fit the photo better. You'll find these adjustment sliders on the right hand side in Lightroom:

1. White balance: Adjusts the warmth of the photo. Slide to the left to make it colder, and to the right to make it warmer.
2. Exposure: Sets the brightness of the photo.
3. Shadows/Highlights: Instead of changing the brightness of the entire photo, you can lighten up shadows or bring out details in a bright sky by adjusting shadows and highlights.

Play around with the settings to find the perfect mood for your picture!

If the installation failed, check out the detailed installation guide with pictures below.

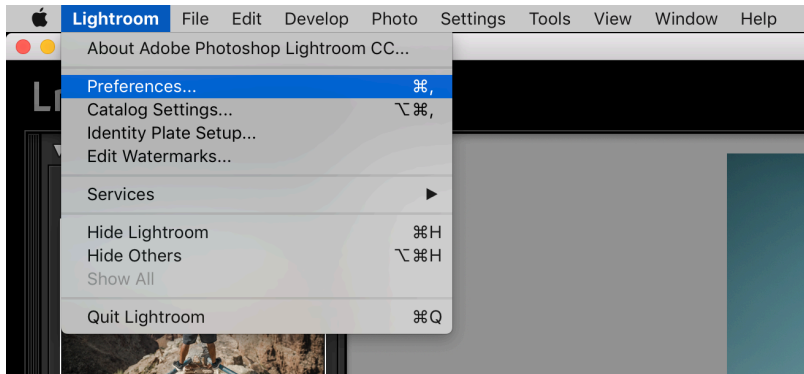

Detailed Installation Guide (with pictures):

Step 1:

Go into Lightroom and click on **Edit** at the top (next to File) on a PC or **Lightroom** then **Preferences** on a Mac.

Step 2:

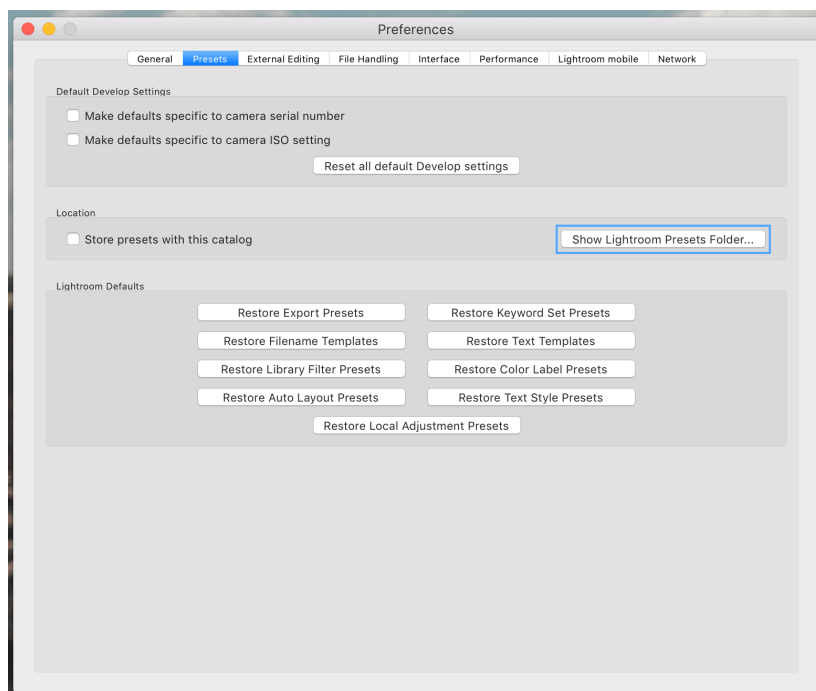

Go down to **Preferences** and click on it.

Step 3:

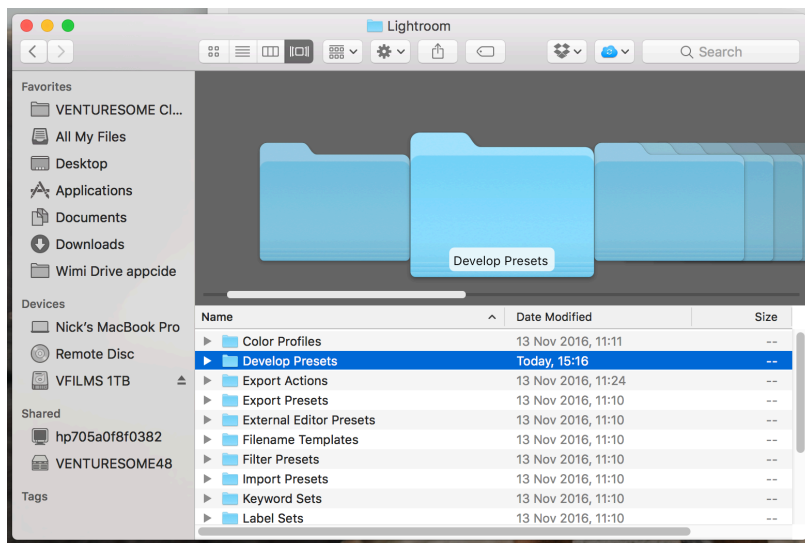

There will be a new screen that pops up. There will be six tabs at the top, click on **Presets** (second tab).

Click on the box titled **Show Lightroom Presets Folder**.

Step 4:

A new window will pop up. Double click on **Lightroom**. Next click on **Develop Presets**.

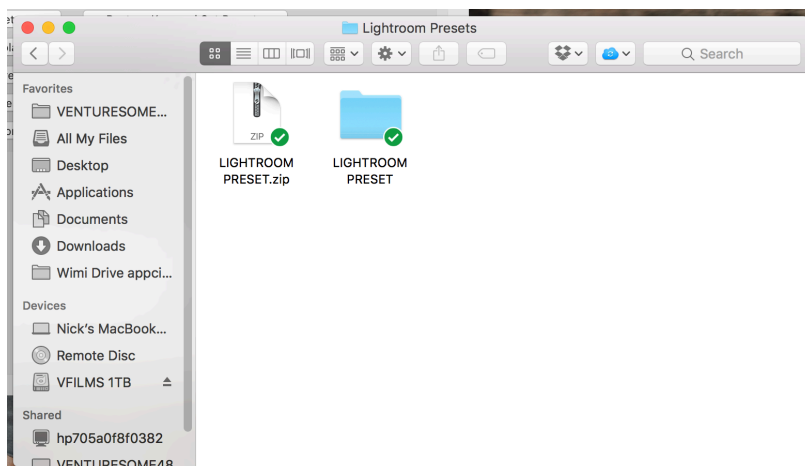

Step 5:

Unzip your downloaded file.

On Windows: Right click and extract the folder.

On a MAC: Simply double click it to do so.

The uncompressed folder will appear next to your .zip file.

Step 6:

Copy the unzipped folder into the „**Develop Presets**“ (Step 4) folder.

Step 7:

Restart Lightroom.

You are done! Have fun using the presets. 😊
